PROFESSIONAL SUMMARY

Data engineer with four years' commercial experience across financial services, law, and technology, most recently in a data-engineering and full-stack role at Visa. Comfortable owning projects end to end, from cloud infrastructure and ETL through to the interfaces that surface data to users. Based in London with full right to work.

EXPERIENCE

Associate Data Engineer

May 2024–Jun 2026

Visa

- As feature lead, designed and delivered an AWS data pipeline that produces monthly billing and reporting data for 8 banking partners, using AWS Glue (PySpark) for the ETL and AWS CDK (TypeScript) to provision separate S3 buckets, Glue jobs, KMS keys and IAM roles for each partner.
- Recreated a legacy black-box billing process as a transparent Spark SQL pipeline over a cloud data warehouse, aggregating transaction-level payment data into per-company monthly metrics with currency conversion and change-data-capture deduplication.
- Built the Qlik-embedding layer (iframe orchestration and cross-frame communication) of a React and Node.js analytics microsite, migrating around 25 dashboards onto a compliant Content Security Policy.
- Independently maintained the Qlik dashboards and Qlik infrastructure through a five-week absence of the team's senior engineer that coincided with a company-wide on-premise-to-cloud migration, resolving configuration and infrastructure issues alongside the operations team.
- Developed a reliable load-completion detection mechanism for third-party dashboards that exposed no official data-ready API, and debugged a data race condition in the async provisioning flow, iterating from polling to a timestamp-based heuristic.
- Delivered SQL Server stored procedures and end-to-end Google Analytics instrumentation (per-partner enablement, server-side initialisation, security-header updates, and form event capture) across a multi-tenant .NET monolith.

Business Intelligence Analyst

Jun 2022–Aug 2023

Russell McVeagh

- Owned the firm's business-intelligence reporting, delivering revenue, client-activity and time-allocation reporting to senior stakeholders.
- Created self-service Power BI dashboards, end to end, for the firm's ~300 lawyers, replacing legacy SSRS reports and eliminating the recurring ad-hoc requests that previously required manual SQL extracts.

Research Analyst

Nov 2021–Jun 2022

Technology Investment Network

- Automated the data-collection process with Python, replacing legacy Excel queries and manual data entry.
- Produced the data analysis and written content that fed the organisation's published reports on the New Zealand technology sector.

EDUCATION

University of Auckland

BEng (Hons), Engineering Science

Feb 2018–Nov 2021

- First Class Honours. Relevant coursework: programming (Python, MATLAB), statistics, machine learning, and optimisation.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Frontend: React, HTML/CSS, Tailwind CSS

Backend & Data: Node.js, Express.js, PostgreSQL, SQL Server (T-SQL), Stored Procedures, PySpark, REST APIs, ETL, Data Warehousing

Cloud & DevOps: AWS (Glue, CDK, S3, CloudFormation, IAM, CodePipeline, Athena, KMS), Git, GitHub Actions, CI/CD, Infrastructure as Code

BI & Reporting: Power BI, Qlik, SSRS

Practices: Agile, Unit Testing (Jest, pytest), Accessibility

CERTIFICATIONS

AWS Certified AI Practitioner (AIF-Co1)

2025

Amazon Web Services

PROJECTS

URL Shortener | *TypeScript, Node.js, Vercel*

A full-stack URL shortener, deployed on Vercel. Built to explore backend and DevOps concepts.

EPL Score Tracker | *React, Node.js, Express, PostgreSQL, REST API*

A full-stack football-score tracker: a React front-end with a Node.js/Express and PostgreSQL backend that syncs Premier League data from an external API and exposes it over a REST API. Built as a learning project against a free API tier that omits the current season, so it is not deployed.

RYM Hide Ratings | *JavaScript, WebExtensions*

A published Firefox extension that hides RateYourMusic ratings until you have rated a release.
